📞 0985651185 — ✉️ waiyanpaing183@gmail.com — 🔗 linkedin.com/in/lucas-wai179 — 🌐 github.com/Lucas1792003

Summary

Computer Science undergraduate with hands-on experience in frontend development, API integration, and collaborative software projects. Experienced in building responsive web applications using React and Next.js, with strong foundations in data structures and algorithms. Seeking opportunities to apply technical expertise in real-world industry environments and grow as a software engineer.

Portfolio: lucas1792003.github.io/Portfolio-2025

Skills

Languages JavaScript, TypeScript, Python, Java
Frontend React, Next.js, Vite, HTML, CSS
Backend & DB Supabase, MongoDB, REST APIs

Tools Git, GitHub, VS Code
Concepts OOP, Data Structures, Algorithms, Debugging

Work Experience

Frontend Developer – Myat Pwint Publishing Platform

2025

Senior Project II — Real-World Client (Myanmar)

- Delivered as Senior Project II in collaboration with a real publishing client based in Myanmar.
- Contributed to the development of a publishing management platform supporting authors, editors, and publishers.
- Built responsive dashboards and manuscript submission workflows using React and Next.js.
- Integrated REST APIs for manuscript tracking, authentication, and role-based access control.
- Refactored reusable UI components to improve consistency and maintainability.
- Collaborated in a Git-based team workflow using feature branches and pull requests.
- **Tech Stack:** React, Next.js, JavaScript, CSS, Git
- GitHub Repository

Frontend Developer — CyfroSec (Cybersecurity SaaS Platform)

2025 – Present

Enterprise Security Operations AI-Powered Vulnerability Management Platform

- Remote frontend developer at a Poland-based cybersecurity startup, contributing to a production-grade enterprise SaaS platform.
- Contributed to the development and production deployment of 3 interconnected frontend applications, evolving from an MVP to a full-scale enterprise security operations platform.
- Collaborated with backend and frontend engineers to build the main SOC dashboard using Next.js 16 (App Router), React 19, and TypeScript (strict mode).
- Implemented secure OAuth 2.0 / OIDC authentication with Keycloak (PKCE S256), including token refresh handling, RBAC, and session persistence.
- Developed real-time features including WebSocket-based notifications and an AI Assistant interface using Server-Sent Events (AG-UI streaming protocol).
- Built advanced reporting tables using TanStack Table with filtering, sorting, column customization, virtualization for large datasets, and Excel export.
- Contributed to a multi-tenant architecture supporting organization-scoped data isolation and account group switching.
- Helped develop a privileged admin console featuring system monitoring dashboards, audit logs, impersonation workflows (GDPR-aware), and role-based route protection.
- Worked in a structured Git workflow with feature branches, code reviews, and cross-team integration with backend APIs.
- **Tech Stack:** Next.js 16, React 19, TypeScript 5, Tailwind CSS v4, Keycloak OAuth2/OIDC, WebSocket, SSE, TanStack Table, OpenAPI codegen, AWS S3

Ongoing Personal Projects

Classivo — Multi-Tenant School Management SaaS Platform

2025 – Present

Team-Based Full-Scale Frontend SaaS Platform (4 Portals, 60+ Pages)

- Contributed to building a multi-tenant SaaS frontend supporting 4 distinct portals (Student, Teacher, School Admin, System Admin) with 60+ pages and 50+ reusable components.
- Implemented role-based access control (RBAC) for 7 user roles with protected route guards, fine-grained permission mapping, and role-aware navigation rendering.
- Architected centralized routing using React Router v7 with nested layouts, role-based redirects, and wildcard permission matching.

- Built global state management using Zustand with localStorage persistence for authentication and notification state.
- Developed a reusable component system (Button variants, Card, Badge, DataTable, FormSection, Input, Select) using Tailwind CSS and a custom glass-morphism design language.
- Implemented dark/light theme switching with system preference detection and persistent theme management.
- Built finance and invoice management modules including CRUD operations, KPI dashboards, printable invoice templates, and PDF generation using jsPDF.
- Implemented type-safe form handling using React Hook Form + Zod across multiple domain modules (student, teacher, course, exam, invoice).
- Developed bilingual internationalization (English + Burmese) using react-i18next with browser language detection and RTL layout support.
- Delivered responsive mobile-first layouts with animated UI transitions using Framer Motion.
- **Tech Stack:** React 18, TypeScript, Vite, Tailwind CSS, Zustand, React Router v7, Framer Motion, React Hook Form, Zod, Recharts, jsPDF

Shwe Pha La — Multi-Shop Retail POS System (Solo Project)

2026 – Present

Full-Scale Retail Operations Inventory Management Platform

- Designed and developed a comprehensive multi-location retail POS system from scratch to manage sales, inventory, staff shifts, supplier workflows, inter-shop transfers, and compliance tracking.
- Built a production-style POS terminal with real-time product search, barcode scanner integration, dynamic cart logic, tier-based bulk pricing, discount handling, and print-optimized thermal receipts.
- Architected a ledger-based inventory tracking system where every stock movement (sale, transfer, adjustment, damage, purchase) generates immutable before/after quantity records for full traceability.
- Implemented approval-based workflows for voids, refunds, stock transfers, and purchase orders with multi-stage lifecycle states and audit logging.
- Developed cashier shift management with automatic expected-cash calculation, variance detection, and enforcement of active shifts before transaction processing.
- Built advanced analytics dashboards using Recharts, including revenue trends, profit tracking, category breakdowns, fast/slow mover analysis, stock health monitoring, and low-stock alerting.
- Engineered a granular RBAC system with 30+ permissions across 4 roles, enforcing both route-level and action-level access control.
- Designed a modular Zustand state architecture (10 domain slices) with localStorage persistence and structured domain typing in TypeScript.
- Implemented full bilingual localization (English + Burmese) across all UI modules.
- Developed a reusable component system and responsive UI using Tailwind CSS with keyboard shortcuts and accessibility-focused interaction patterns.
- **Tech Stack:** React 19, TypeScript, Vite, Zustand, React Router v7, React Hook Form + Zod, Recharts, Tailwind CSS

Projects

MoodCast Weather & Activity Vibe App

2025

- Built a fun, cross-platform weather app that blends real-time forecasts with AI-powered outfit ideas and mood-based activity suggestions.
- Integrated Google Gemini AI to generate personalized outfit recommendations based on weather conditions, location, and user mood.
- Designed a dynamic, weather-aware UI with animated themes (day/night, rain, heat, storm) and customizable dashboard cards.
- Implemented smart nearby activity suggestions using geolocation and indoor/outdoor filtering logic.
- Optimized performance with API caching, request deduplication, and responsive layout design.
- **Tech Stack:** Next.js, React Native (Expo), TypeScript, Tailwind CSS, Google Gemini AI, Open-Meteo API
- GitHub Repository

Web Development Portfolio — Assignment Tracker & Showcase

2024

- Designed and built a personal portfolio website to track weekly web development assignments and consolidate project submissions in one centralized dashboard.
- Implemented a custom tracking system to monitor progress across multiple React projects, improving organization and submission consistency.
- Added a creative Elden Ring-inspired theme as a fun UI experiment, including dark-mode styling and responsive layouts.
- Optimized asset loading and component structure for clean performance and maintainability.
- **Tech Stack:** React, JavaScript, HTML, CSS
- GitHub Repository

Pawsitive — Pet Shop Website (Early Full-Stack Project)

2023

- Developed a multi-page pet shop website as an early-stage full-stack learning project.
- Built product listing pages, contact forms, and simulated e-commerce flows.
- Integrated PHP-based backend logic for form handling and basic server-side processing.
- Practiced frontend-backend integration, responsive layouts, and structured project organization.
- **Tech Stack:** HTML, CSS, PHP
- GitHub Repository

Education

Assumption University
Bachelor of Science in Computer Science

Expected Graduation: 2026

Certifications

AWS Academy Cloud Foundations
Issued: March 05, 2024

AWS Academy Cloud Developing
Issued: February 21, 2025

AWS Academy Cloud Security Foundations
Issued: January 26, 2026

Academic Highlights

Relevant Coursework

- Data Structures and Algorithms
- Database Systems
- Web Development
- Object-Oriented Programming
- Fundamental of Programming (Python)

Activities

- Volunteered as tutor for junior students in introductory programming.
- Participated in University Coding Club activities and hackathons.

Achievements

- Completed AWS Academy Cloud Foundations certification.
- Completed AWS Academy Cloud Developing certification.
- Completed AWS Academy Cloud Security certification.
- Deployed multiple projects publicly via GitHub Pages.
